RT08, August '08

Current Real-time Ray Tracing

- Use large ray packets (16-256 rays)
- Focused on primary visibility and point-light shadows
- Images somewhat dull
- Easily generated using rasterization algorithms

RT08, August '08

This Work: Whitted Ray Tracing

- Whitted Ray tracing:
 - Primary Visibility
 - Point-light Shadows
 - Reflections
 - Refractions

RT08, August '08

Mission

- Study large ray packets for Whitted ray tracing
 - Scene traversal (BVH)
 - Partition Traversal: *New!*
- Frustum Culling
 - General secondary ray packets: *New!*

Mission

- Evaluation of old and new algorithms
 - Ray packet size
 - Scene complexity
 - Ray Recursion Complexity

Result: Real-time Whitted RT

RT08, August '08

Outline

- Motivation
- Frustum Culling for Secondary Rays
- Scene Traversal with Large Ray Packets
- Results

Frustum Culling

- Primary Rays
 - Reshetov et al. 2005
- Point-Light Shadow Rays
 - Boulos et al. 2006 , Wald et al. 2007
- Reflection + Refraction Rays
 - *New!*

Frustum Culling: Point Light

1. Choose dominant axis: \hat{k}
2. Find (u, v) intersection points at $k = 1$.
3. Get min/max (u, v) coords.

Frustum Culling: Point Light

1. Choose dominant axis: \hat{k}
2. Find (u, v) intersection points at $k = 1$.
3. Get min/max (u, v) coords.
4. Create 4 corner rays.
5. Compute plane normals.

Frustum Culling: Reflection

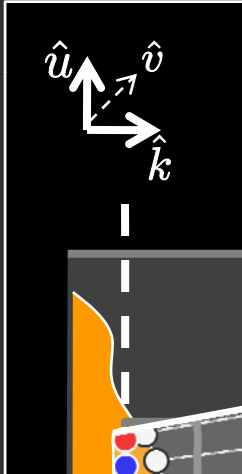

RT08, August '08

Frustum Culling: Reflection

RT08, August '08

Frustum Culling: Reflection

1. Choose dominant axis: \hat{k}
 2. Find (u, v) intersections with 2 planes:
 1. $+\hat{k}$ from scene AABB.
 2. $-\hat{k}$ from samples' AABB.
 3. Get min/max (u, v) coords.
 4. Create 4 corner rays.
 5. Compute plane normals.
- 

Outline

- Motivation
- Frustum Culling for Secondary Rays
- Scene Traversal with Large Ray Packets
- Results

3 Algorithms for Scene Traversal

- Masked Traversal – Control Method
 - Based on Wald 2001, Reshetov 2005 (MLRT)
 - Only good for small packets
- Ranged Traversal – State-of-the-art
 - Wald et al. 2007
 - Degrades performance for incoherent rays!
- Partition Traversal: *New!*
 - Robust to incoherent rays and large packets

- Ray Recursion Complexity

3 Performance Variables

- Ray Packet Size
- Scene Complexity
- Ray Recursion Complexity

Traversal vs. Ray Packet Size

- Masked Traversal: performance degrades for $> 4 \times 4$ packets
- Ranged Traversal: performance degrades for $> 8 \times 8$ packets
- Partition Traversal: performance increases with packet size

Fairy Scene
2-Bounce Reflections

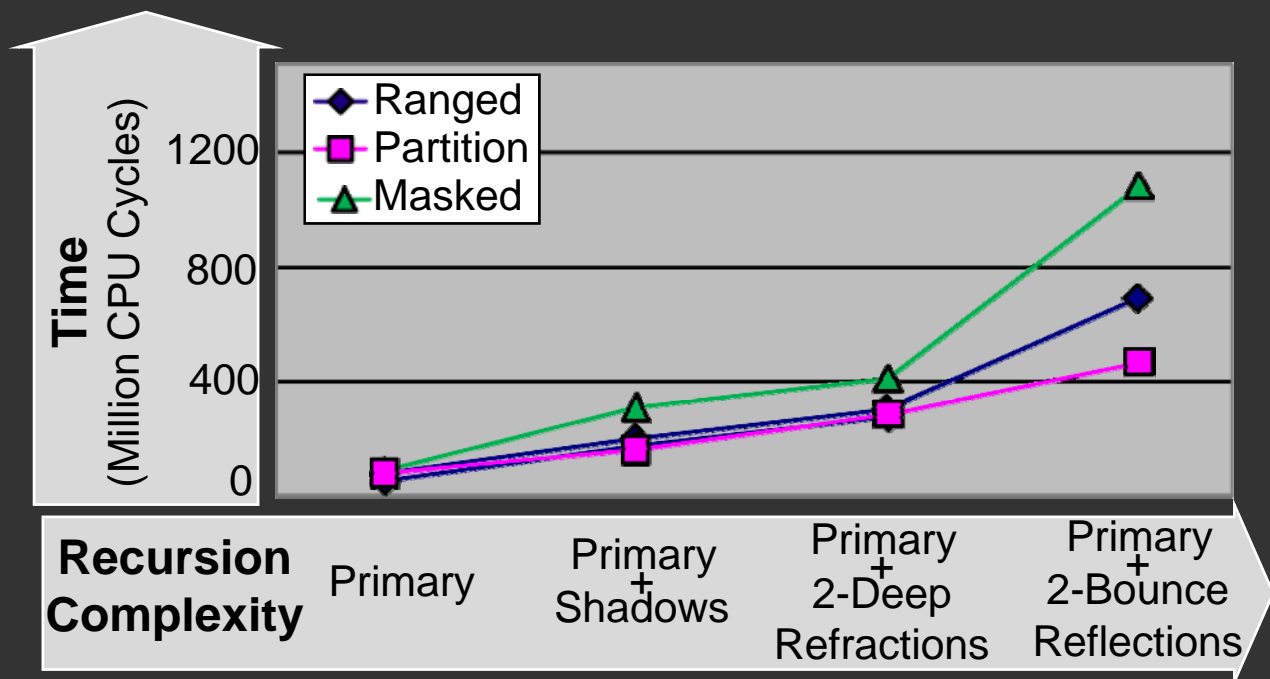

Traversal vs. Recursion Complexity

- Masked Traversal: Degrades with recursion complexity
- Ranged Traversal: Degrades with recursion complexity
- Partition Traversal: More robust to increasing recursion complexity

Fairy Scene
16x16 Packets

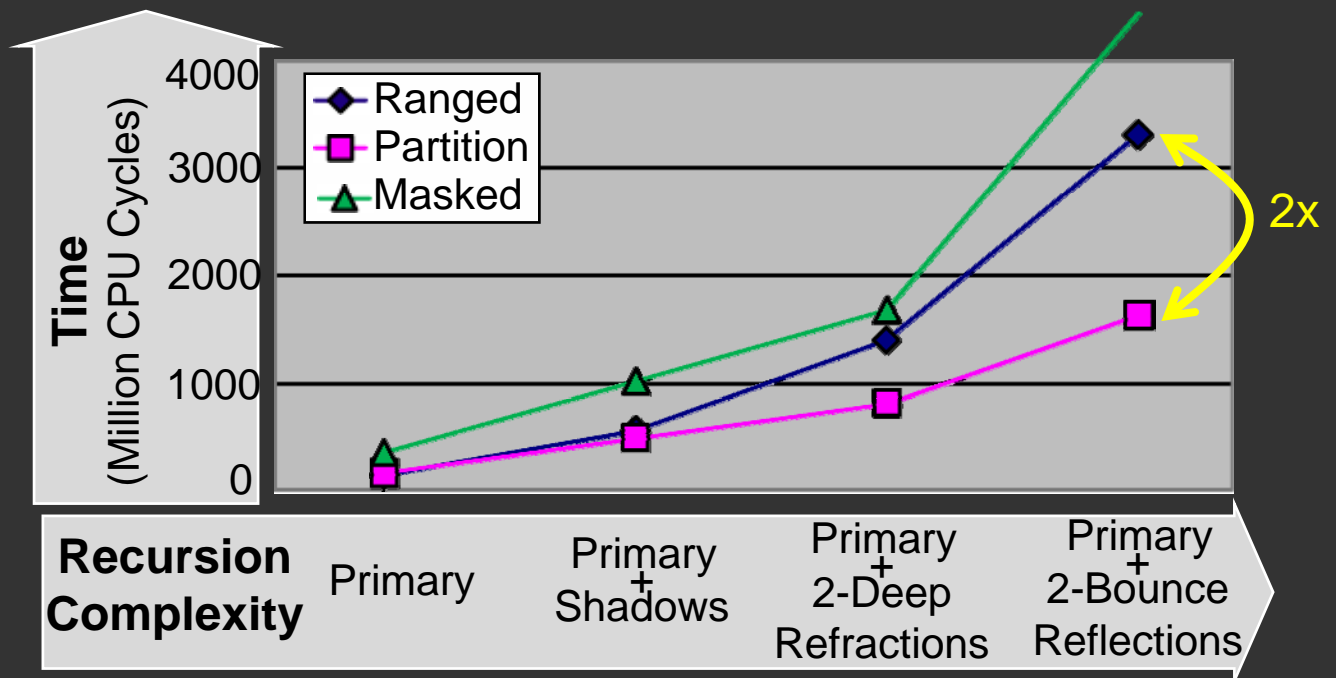

Traversal vs. Recursion Complexity

- Difference between Partition and Ranged more pronounced on more complex scenes

Rings Scene
16x16 Packets

Traversal vs. Scene Complexity

- Ranged Traversal: Degrades with scene complexity
- Partition Traversal: More robust to increasing scene complexity

Scene Complexity

2-Bounce Reflections
16x16 Packets

RT08, August '08

Ranged vs. Partition Traversal

- Ranged Traversal
 - Most ray—cell tests deep in BVH
 - More extra ray—triangle tests for incoherent rays
- Partition Traversal
 - Most ray—cell tests high in BVH
 - No extra ray—triangle tests

Traversal: Summary

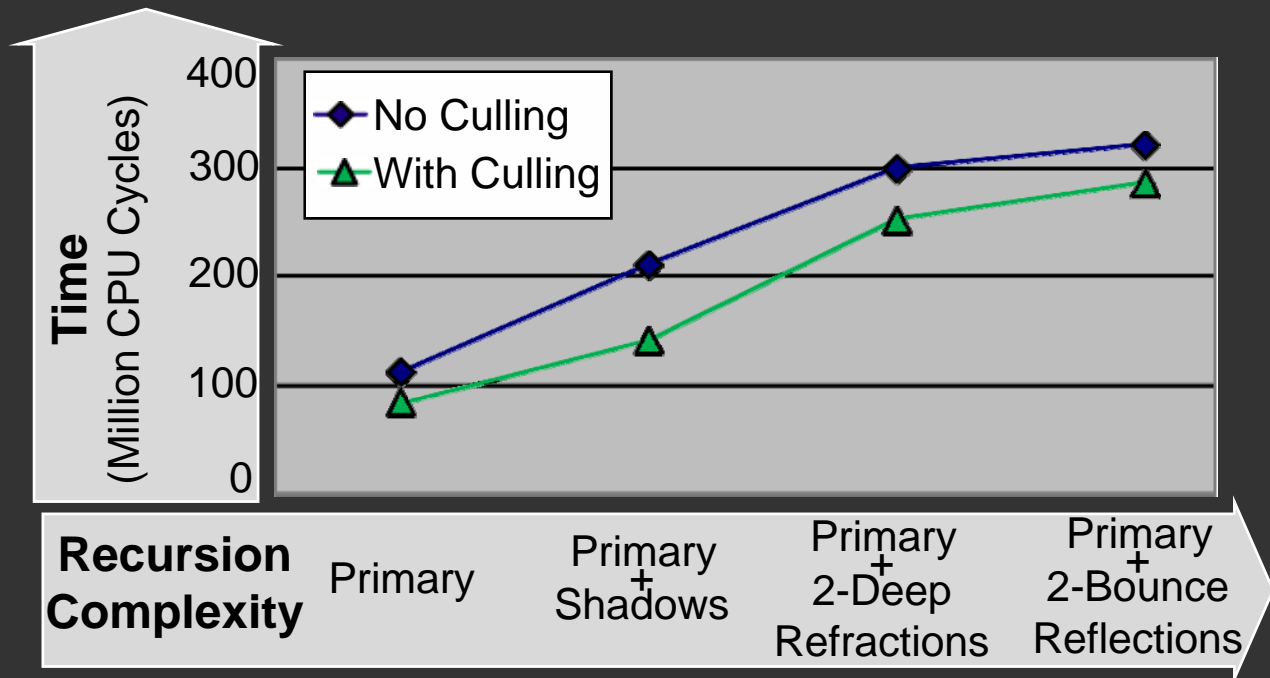

- Use Ranged Traversal
 - Primary rays and coherent point-light shadow rays
 - Small to medium packets: $\leq 8 \times 8$ rays
- Use Partition Traversal
 - Incoherent rays: deep reflections + refractions
 - Large ray packets: $\geq 16 \times 16$ rays

Frustum Culling vs. Recursion Complexity

- Frustum culling provides modest benefits

Toasters Scene
16x16 Packets

Frustum Culling: Summary

- Primary + Point-light Shadows
 - Up to 2x performance benefit possible
 - But more often ~1.5x or less
- Reflections + Refractions
 - Expect 1.2x – 1.3x performance benefit

Conclusion

- Use ranged and partition traversal in correct situation
- 16x16 packets: 3x – 6x benefit over 2x2
- Whitted Ray Tracing is now interactive to real-time

Real-Time Whitted Ray Tracing

- Primary Visibility
 - Ranged Traversal
- Point-Light
 - Ranged Traversal
- 1-Bounce Reflections
 - Ranged Traversal

Conclusion

- Primary Visibility
 - Ranged Traversal
- 3-Bounce Reflections
 - Partition Traversal

Conclusion

- Primary Visibility
 - Ranged Traversal
- Point-Light Shadows
 - Partition Traversal
- 3-Deep Refractions
 - Partition Traversal
- 1-Bounce Reflections
 - Partition Traversal
