

This table is for correction to Table 2. The result of hypothesis testing of slope and different intercept (calculated at mean age) between control and Down syndrome via t-test is shown below. Adjusted p is based on false discovery rate correction for multiple comparisons. This table is obtained after acquiring exact age of subjects rather than an approximation.

	Group Differences in Intercept		Group Differences in Slope	
	Raw p	Adjusted p	Raw p	Adjusted p
ALIC R	0.0014	0.0078	0.0269	0.0591
ALIC L	0.3546	0.5572	0.3140	0.3454
PLIC R	0.9751	0.9865	0.0672	0.1205
PLIC L	0.5208	0.7109	0.3715	0.3715
Genu	0.5816	0.7109	0.2657	0.3247
BCC	0.0258	0.0567	0.0767	0.1205
Splenium	0.9865	0.9865	0.2243	0.3085
