Probabilistic Asymptotic Decider for Topological Ambiguity Resolution in Level-Set Extraction for Uncertain 2D Data

Tushar Athawale and Chris R. Johnson

(a) The isocontour topology in the (b) The asymptotic decider in the mean (c) The probabilistic midpoint decider (d) The probabilistic asymptotic decider

I. The probabilistic midpoint decider

I. The probabilistic midpoint decider

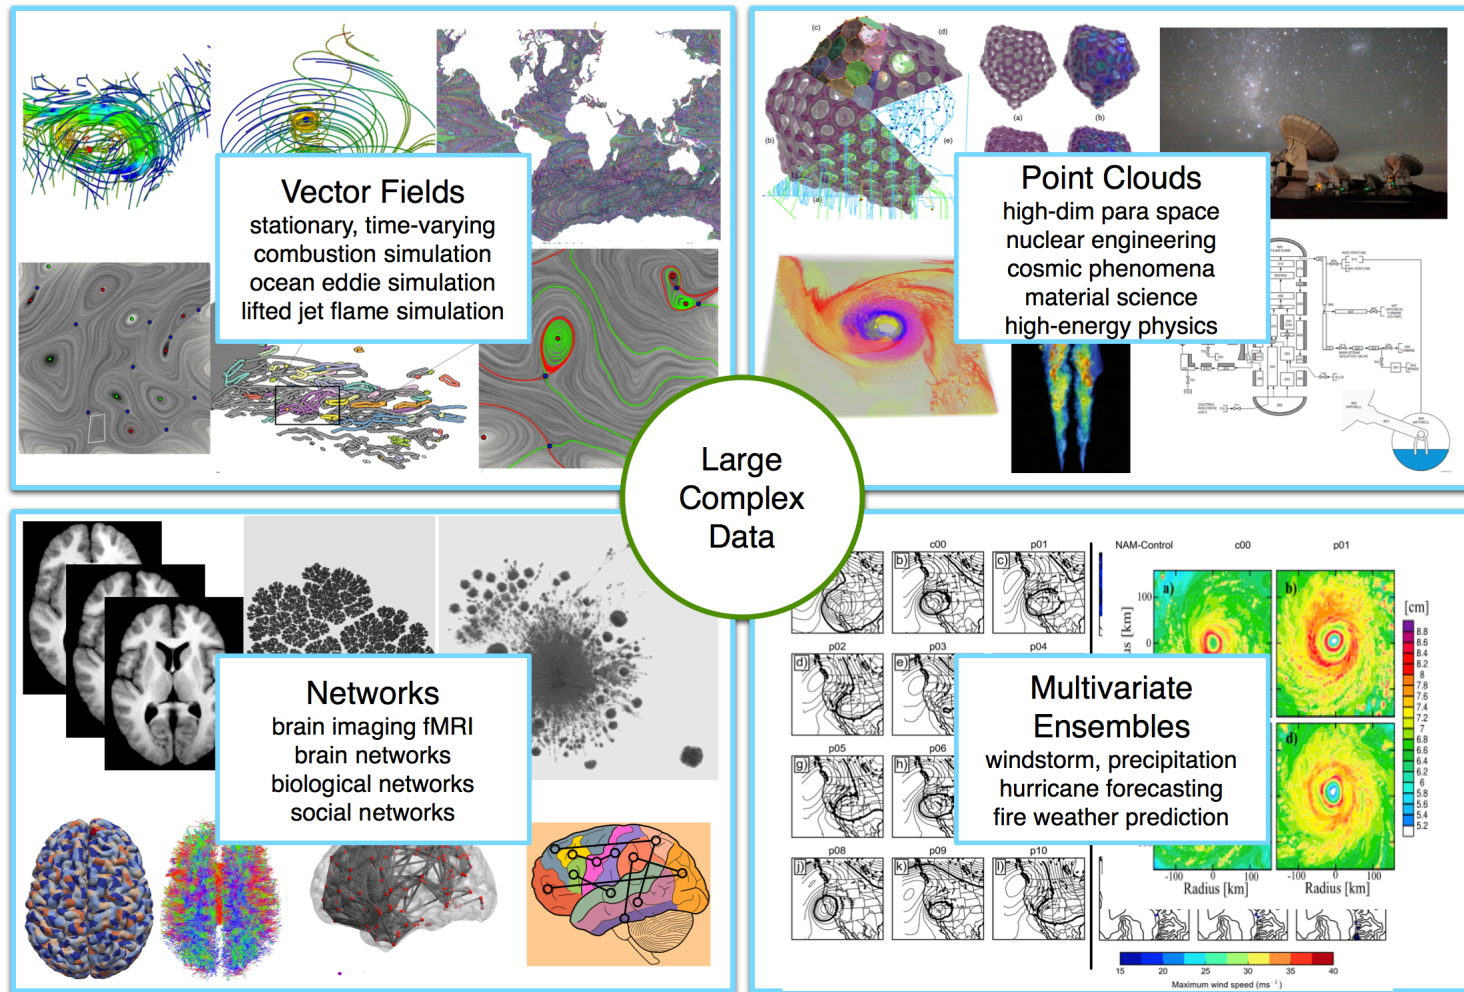

II. The probabilistic asymptotic decider

II. The probabilistic asymptotic decider

(a) The temperature field

(b) The velocity field for the Kármán vortex street

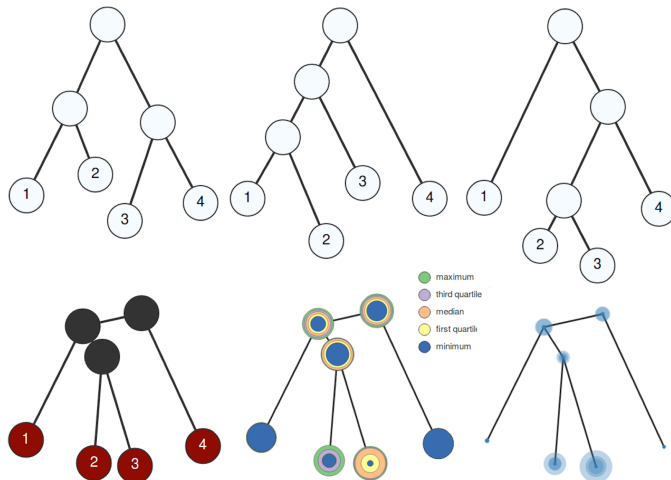

Topological Data Analysis and Visualization

Visualizing uncertainty in topological structures

Merge Tree: a topological summary of scalar fields

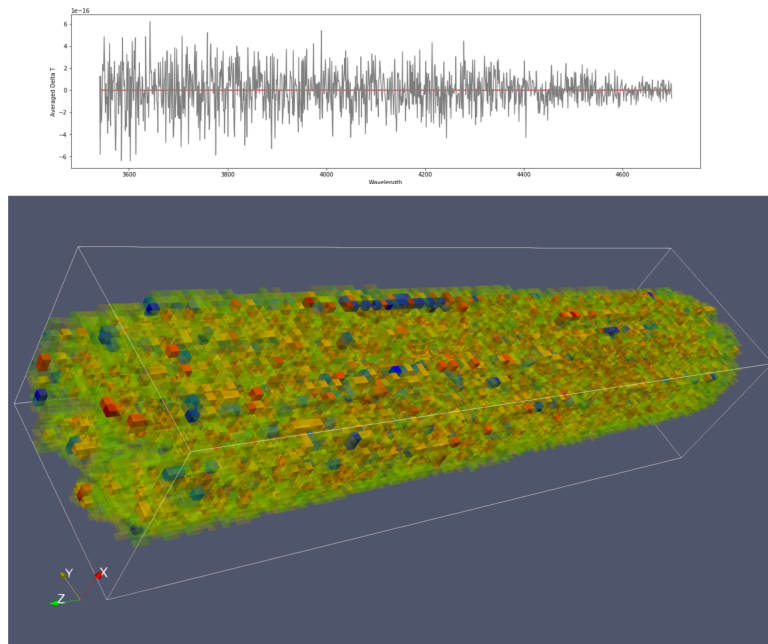

Merge trees that arise from an ensemble of scalar fields

1. Compute an average merge tree from an ensemble
2. Uncertainty visualization of the average tree captures structural variations among the ensembles

Pathfinder: Visual Analysis of Paths in Graphs

C. Partl, S. Gratzl, M. Streit, A. Wassermann, H. Pfister, D. Schmalstieg, A. Lex. “**Pathfinder: Visual Analysis of Paths in Graphs,**” In *Computer Graphics Forum (EuroVis '16)*, Vol. 35, No. 3, pp. 71-80, 2016.

Scalable Deployment: Exploration of 3.5PB of NASA Weather/Climate Data in Real Time

Workflow

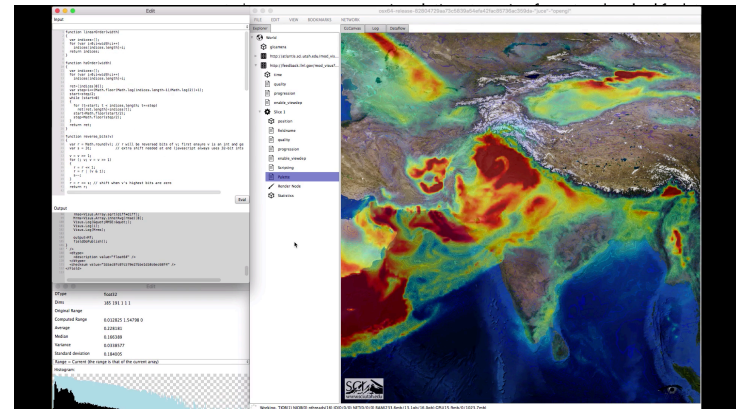

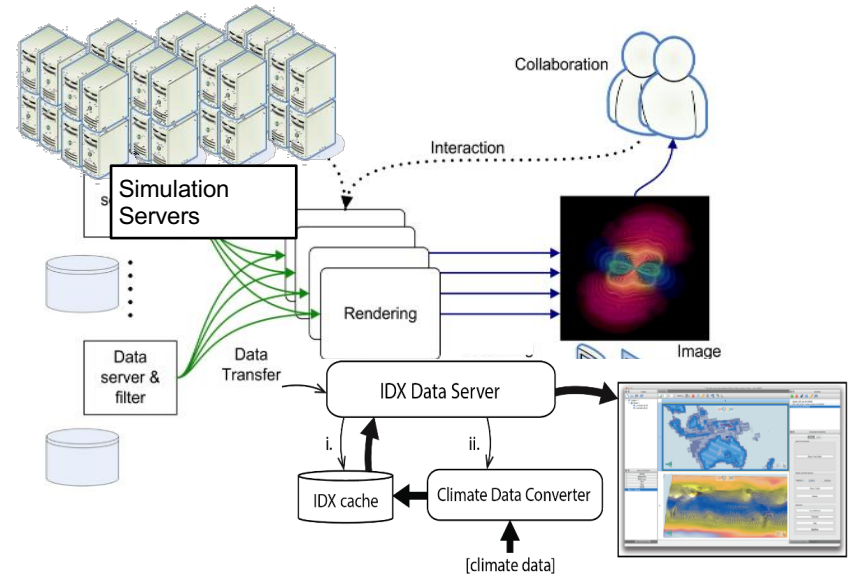

- *Data creation*
 - *Data Management*
- Processing
 - Analysis
 - Visualization

- 7km GEOS-5 “Nature Run”
- 1 dataset, 3.5 PB
- theoretically: openly accessible
- practically: precomputed pics

Distributed Resources

- 3.5 PB of data store in NASA
- Primary ViSUS server in LLNL
- Secondary ViSUS server in Utah
- Clients connect remotely
- Work without additional HPC resources

High Performance Data Movement for Real-Time Monitoring of Large Scale Simulations

DOE PSAAP2 Simulations of GE Clean(er) Coal Boilers

- Large scale turbulent combustion needs mm scale grids
 10^{14} mesh cells 10^{15} variables (1000x more than now)
- Structured, high order finite-volume discretization
- Mass, momentum, energy conservation
- LES closure, tabulated chemistry
- PDF mixing models
- DQMOM (many small linear solves)
- Uncertainty quantification

- Low Mach number approx. (pressure Poisson solve up to 10^{12} variables. 1M patches 10 B variables)
- **Radiation** via Discrete Ordinates – many hypr solves Mira (cpus) or ray tracing Titan (gpus strong and weak scaling via AMR).
- FAST I/O needed PIDX for scalability

LAMMPS In-Situ Rendering with OSPRay

In Situ Visualization of LAMMPS with SENSEI and OSPRay

VisTrails

Notes:
In this workflow, we describe the density field induced by the particles in the cosmology in question. This density field is visualized by a volume rendering of the field with an appropriate transfer function. Tones in red represent extremely low density regions whereas blue hues depict areas of high density. Imposing error analysis methods here would greatly help validate the accuracy of the visualization.

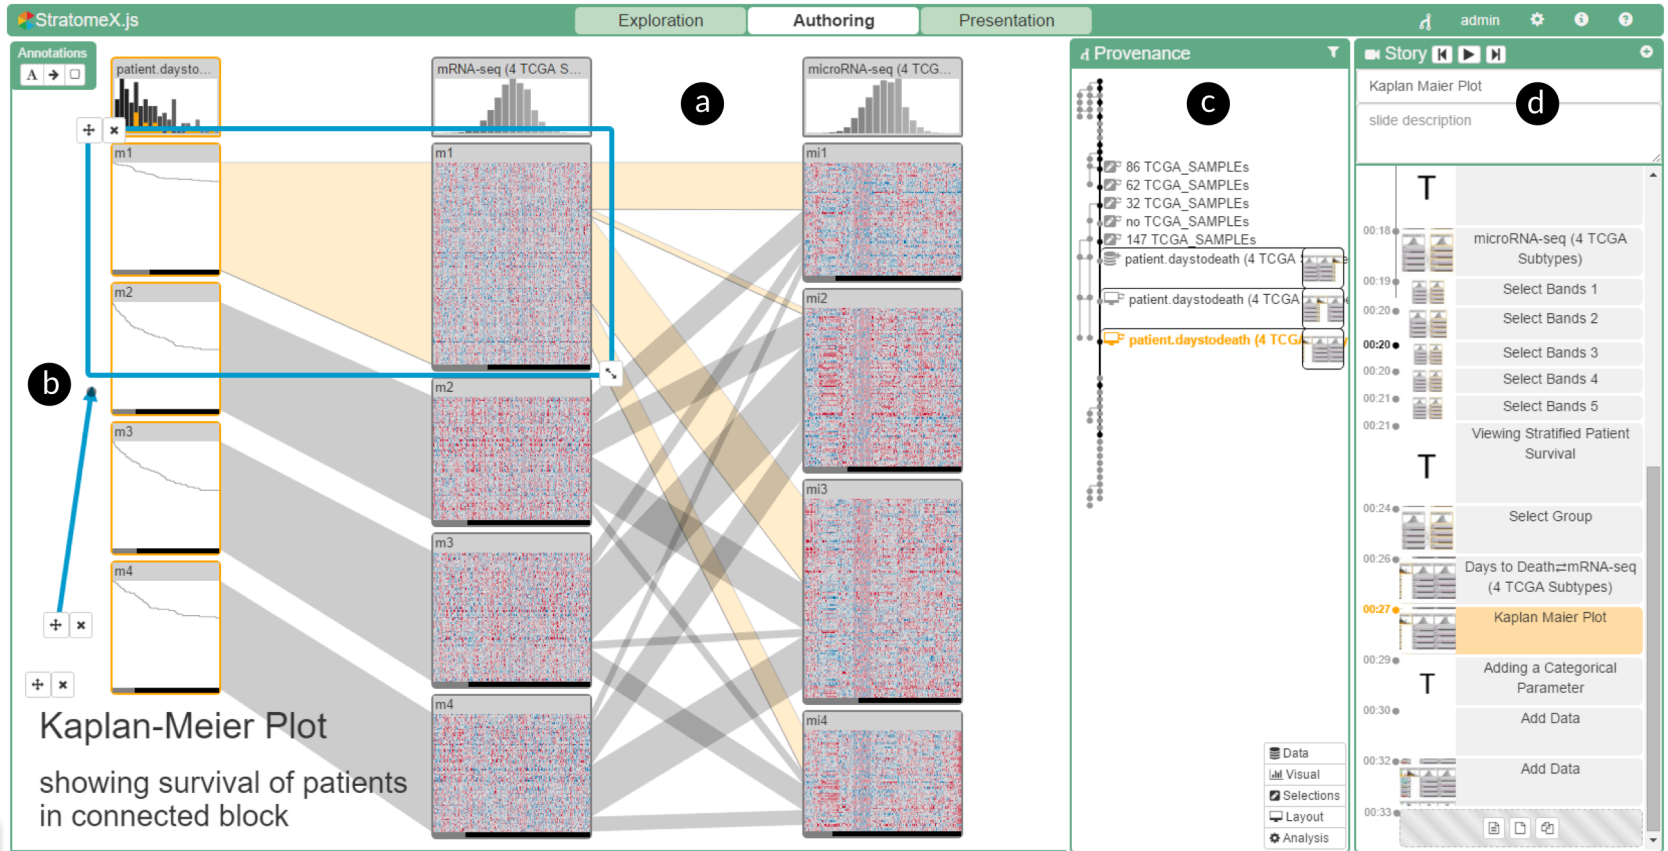

This screenshot shows the VisTrails VCDAT interface. It includes a 'History Tree' on the right, a 'VisTrails Shell' window at the bottom, and a 'Visualization Spreadsheet' at the bottom. The shell window shows the following code:

```
VisTrails shell running Python 2.6.4 (r264:75821M, Oct 27 2009, 19:48:32)
[GCC 4.0.1 (Apple Inc. build 5493)] on darwin.
Type "copyright", "credits" or "license" for more information on Python.
>>> import vcs, cdms2
>>> cdat = load_package('CDAT')
>>> cdmsfile = cdms2.open('/home/emanuele/src/cdat_bin/sample_data/clt.nc')
>>> data = cdmsfile['clt']
>>> q = cdat.quickplot()
>>> run()
```

The 'Visualization Spreadsheet' shows four panels (A, B, C, D) displaying different stages of the density field analysis, including curvature analysis and volume rendering.

Reproducibility in Computational Workflows
