# Contribution of EEG and MEG beamforming to the localization of interictal epileptiform dis- charges

Dissertation

# Contents

<b>1</b>	<b>Introduction</b>
1.1	Introduction to EEG and MEG . . . . .
1.2	Brain signals and how to measure them . . . . .
1.3	EEG and MEG recordings . . . . .
1.4	How head properties influence the measurements . . . . .
<b>2</b>	<b>Medical background</b>
2.1	What is epilepsy . . . . .
2.2	The role of EEG and MEG . . . . .
<b>3</b>	<b>Mathematical Background</b>
3.1	The forward problem . . . . .
3.2	The inverse problem . . . . .
3.3	Combining EEG and MEG . . . . .
<b>4</b>	<b>The Beamformer approach for source reconstruction</b>
4.1	A brief History . . . . .
4.2	Formulation of the beamformer as individual spatial filter . . . . .
4.3	Filter designs for EEG and MEG . . . . .
4.4	The covariance estimation problem . . . . .
<b>5</b>	<b>Influence of the head model to the localization</b>
5.1	Materials and Methods . . . . .
5.2	Results . . . . .
5.3	Discussion . . . . .
<b>6</b>	<b>A comparison of beamformer and dipole scans for somato-sensory evoked potentials and fields</b>
6.1	Introduction . . . . .
6.2	Materials and Methods . . . . .
6.3	Results . . . . .
6.4	Discussion . . . . .
<b>7</b>	<b>Beamformer for the localization of epileptic spikes</b>
7.1	Materials and Methods . . . . .
7.2	Results . . . . .
7.3	Discussion . . . . .

## *Contents*

<b>8 Distributional methods for spike localization</b>	
8.1	Introduction of simple distributional methods . . . . .
8.2	RAMUS as a novel approach . . . . .
8.3	Comparison between RAMUS and beamforming . . . . .
8.3.1	Materials and Methods . . . . .
8.3.2	Results . . . . .
8.3.3	Discussion . . . . .
<b>9 Interictal Spike Localization via Gaussian Mixture Models</b>	
9.1	Using Gaussian Mixture Models for clustering . . . . .
9.2	Application for epilepsy data . . . . .
9.2.1	Materials and Methods . . . . .
9.2.2	Results . . . . .
9.2.3	Discussion . . . . .
<b>10 Discussion and outlook</b>	
<b>11 Summary</b>
