Calibrating finite element head models using EEG/MEG to account for variability in conductivity

Dissertation

Vorgelegt von Sophie Schrader
Betreut von Prof. Carsten Wolters
2021

Contents

1. Introduction **1**

2. Background of EEG & MEG measurements **3**

2.1. Generators of EEG and MEG signals 3

2.2. Geometric and conductive properties of human head tissues 5

2.3. EEG and MEG recordings 10

3. Mathematical background **15**

3.1. The EEG forward problem 15

3.2. The MEG forward problem 17

3.3. (Quasi-)Analytical solutions of the EEG/MEG forward problems 18

3.4. Combining EEG/MEG analysis 20

4. Finite Element Methods to solve the EEG/MEG forward problems **23**

4.1. Solving the EEG forward problem 24

4.1.1. Weak formulation 24

4.1.2. Discretization using conforming FEM 26

4.1.3. Direct source models 29

4.1.4. Subtraction source model 30

4.2. Solving the MEG forward problem 32

4.3. Efficient leadfield computation 33

5. A novel pipeline for calibrated head volume conductor models **39**

5.1. Motivation and comparison to existing calibration approaches 39

5.2. A novel calibration algorithm 41

5.3. Variations of the calibration algorithm 47

6. Validation and evaluation in spherical head models **51**

6.1. Influence of conductivities on EEG pole distance and error measures 51

6.1.1. Materials and Methods 51

6.1.2. Results 54

6.1.3. Discussion . . . 58
6.2. Application of calibration algorithm . . . 59
6.2.1. Materials and Methods . . . 60
6.2.2. Results . . . 66
6.2.3. Discussion . . . 82

7. Application in realistic head models **87**
7.1. Materials and Methods . . . 89
7.1.1. Data acquisition . . . 89
7.1.2. Analysis pipeline . . . 91
7.2. Results . . . 93
7.2.1. Choice of reference data . . . 93
7.2.2. Differences between somatosensory experiments . . . 95
7.2.3. Comparison of head volume conductor models . . . 96
7.2.4. Numerical source models . . . 98
7.2.5. Variations of algorithm . . . 99
7.3. Discussion . . . 100

8. Application in presurgical epilepsy diagnosis **101**
8.1. Materials and Methods . . . 101
8.2. Results . . . 103
8.3. Discussion . . . 105

9. Software implementation **107**
9.1. Calibration procedure . . . 107
9.2. DUNEuro software toolbox . . . 108

10. Discussion and outlook **111**
10.1. Applications and further development of the calibration algorithm . . . 111
10.2. MEG sensitivity to head tissue conductivities . . . 114
10.3. DUNEuro: Current projects and objectives . . . 115

11. Summary **117**

A. Appendix **119**

Bibliography **129**
